

Falcon Shield: Mergers and Acquisitions

Benchmark and protect new digital assets and instances

Comparing multiple instances of a software as a service (SaaS) application after a merger opens the opportunity to benchmark security posture and define best practices.

When companies merge or are acquired, they need to align multiple tenants of the same application, right-size permissions for employees whose roles have changed, and ensure the new apps meet compliance standards.

SaaS security oversees the secure integration of these new applications into the corporate SaaS stack. With CrowdStrike Falcon® Shield, security teams have the opportunity to quickly get up to speed on security posture, users, and compliance to put the right protections in place to keep threat actors at bay.

Use cases

Benchmark applications

Define application benchmarks and apply them to each instance of the SaaS application to improve the overall security posture of your SaaS stack.

Identify best practices

Compare security checks between the applications to better understand the differences in security posture and develop a set of best practices for each application.

Right-size user permissions

Gain a granular view into user permissions to ensure that each user has the right level of access needed to perform their role.

Deprovision users

Create lists of users who are dormant, users who are disabled in the Active Directory or LDAP, or users who no longer require access and automatically deprovision their access.

Upgrade compliance

Meet regulatory standards or internal policies by comparing existing configurations to requirements.

Monitor by subsidiary

View an application's security posture based on the company it came from, the department it came from, or any other organizational domain.

About CrowdStrike

CrowdStrike (Nasdaq: CRWD), a global cybersecurity leader, has redefined modern security with the world's most advanced cloud-native platform for protecting critical areas of enterprise risk — endpoints and cloud workloads, identity and data.

Powered by the CrowdStrike Security Cloud and world-class AI, the CrowdStrike Falcon® platform leverages real-time indicators of attack, threat intelligence, evolving adversary tradecraft and enriched telemetry from across the enterprise to deliver hyper-accurate detections, automated protection and remediation, elite threat hunting and prioritized observability of vulnerabilities.

Purpose-built in the cloud with a single lightweight-agent architecture, the Falcon platform delivers rapid and scalable deployment, superior protection and performance, reduced complexity and immediate time-to-value.

CrowdStrike: **We stop breaches.**
