

Sevco Security: Comprehensive Vulnerability Prioritization

Prioritize vulnerabilities using a comprehensive asset inventory

Challenges

Without an accurate IT asset inventory, it's nearly impossible to know where tools like the CrowdStrike Falcon® platform need to be deployed across a growing environment. Underdeployed security tools result in exposures and vulnerabilities. In order to more effectively prioritize and remediate risk, you need better data and visibility to ensure comprehensive tool coverage and mitigated security risk.

Solution

Sevco Security provides a comprehensive IT asset inventory, the foundation for any security and vulnerability management program. By surfacing and prioritizing the riskiest CVEs alongside environmental vulnerabilities — like missing or misconfigured agents, shadow IT, end-of-life systems and more — you can more effectively remediate risks and protect against potential threats. Integrating with the CrowdStrike Falcon platform and other security tools, Sevco aggregates, correlates and deduplicates managed assets into a single, comprehensive inventory to provide a comprehensive view of the environment — and previously unknown vulnerabilities.

Key benefits

- Automate security gap discovery to drive full deployment of your existing tools
- Discover environmental vulnerabilities like missing or misconfigured security controls
- Prioritize multiple vulnerability classes in one dashboard
- Automate remediation of gaps and vulnerabilities and validate efficacy
- Rationalize license counts when organizational changes occur

Business value

Use Case/Challenge	Solution	Benefits
Security gaps and underdeployed tools	Identifies previously unknown assets	Ensure tools like CrowdStrike Falcon are deployed everywhere they should be
Vulnerability and exposure backlog	Layers technical severity and business context for better prioritization of risks and exposures	Prioritize environmental vulnerabilities — like missing and misconfigured agents, shadow IT, end-of-life systems and more — alongside software vulnerabilities like CVEs in a single dashboard
Incomplete remediation	Automates and validates remediation	Automate remediation actions through Sevco, and validate successful remediation when it's observed on the asset, not when a ticket is closed
Reduced spend on extra licenses	Finds unused licenses	Sevco can identify unused licenses to rationalize license counts and reduce costs

Technical solution

Sevco integrates with CrowdStrike Falcon® Insight XDR and CrowdStrike Falcon® Discover to ingest rich data around hosts and devices — and associated details — correlating them with assets like devices, users, software and vulnerabilities from other tools to build a comprehensive inventory of assets. With this holistic view, teams can uncover potential gaps in security tool coverage and vulnerabilities.

From this inventory, Sevco allows you to surface the risks in your environment, prioritized in a single dashboard by technical severity — all layered with the virtually limitless intelligence on asset criticality and business context pulled from tools in your environment.

"Sevco is a high-impact solution that was quick to configure and delivered extremely quick time-to-value. Having a comprehensive understanding of our assets has really helped us to maximize the investments of my existing tools."

– Cecil Pineda, R1 RCM, Chief Information Security Officer

Key capabilities

Prioritize vulnerabilities with unlimited intelligence

- See all devices, users, software, vulnerabilities and controls in one platform to ensure comprehensive CrowdStrike Falcon deployment
- Prioritize vulnerabilities by technical severity and business impact

Automate and validate remediation

- Automate remediation and validate efficacy on the asset — not when a ticket is closed
- Uncover incomplete remediation to drive cross-team accountability and process improvements

Measure and manage risk mitigation performance

- Track metrics like mean time to remediation (MTTR), compliance with remediation SLAs, and patch efficacy
- Gain real-time, organization-wide visibility into the state of your security posture

Sevco Security is a trusted CrowdStrike Marketplace partner providing comprehensive visibility of devices, users and software, leveraging the Falcon platform's capabilities to uncover vulnerabilities like CVEs and missing or misconfigured agents.

About Sevco Security

Sevco is the asset intelligence company that delivers enterprise-wide visibility and prioritization across all classes of vulnerabilities. Built upon the industry's most accurate, real-time inventory of an organization's devices, users, software, and controls, Sevco enables CISOs and security teams to fully understand the risk and business impact of unaddressed vulnerabilities for more informed prioritization. Sevco automates and validates remediation, tracking metrics to close the loop between issue identification and remediation to drive more proactive security.

About CrowdStrike

CrowdStrike (Nasdaq: CRWD), a global cybersecurity leader, has redefined modern security with the world's most advanced cloud-native platform for protecting critical areas of enterprise risk — endpoints and cloud workloads, identity and data.

Powered by the CrowdStrike Security Cloud and world-class AI, the CrowdStrike Falcon® platform leverages real-time indicators of attack, threat intelligence, evolving adversary tradecraft and enriched telemetry from across the enterprise to deliver hyper-accurate detections, automated protection and remediation, elite threat hunting and prioritized observability of vulnerabilities.

Purpose-built in the cloud with a single lightweight-agent architecture, the Falcon platform delivers rapid and scalable deployment, superior protection and performance, reduced complexity and immediate time-to-value.
