

Falcon Shield: No-Code Custom Security Checks

Create custom checks of software as a service (SaaS) settings without any code

Every company develops its own security policy that is tailored to the needs of the organization, its industry, its partners, and its employees.

The flexible CrowdStrike Falcon® Shield solution enables business users and security teams to create their own security checks to align with corporate policy.

Use filters to perform security checks related to applications, security domains, compliance standards, users, and devices. Add in remediation steps, set an impact level, and save them as security checks.

Features

- **Automated checks of every security setting**
Minimize manual SaaS security checks
- **Use data from the entire SaaS stack**
Create complex policies across multiple apps
- **Align security checks with compliance standards**
Create security checks to help meet your specific compliance standards
- **Out-of-the-box integrations for over 150 applications**
Create security checks that fit your company's needs across your entire SaaS stack within minutes of onboarding

Capabilities

Deprovision past employees

Identify former employees with access to company SaaS apps and remove their access

Detect permissions sprawl

See which users have more permissions than similar users within a group or profile

Ensure admins are using fully protected devices

Identify any admin using an unmanaged or unsecured device to access SaaS apps

Receive alerts on new privileged users

Receive alerts when new admins are added or privileged scopes are granted to your SaaS apps

About CrowdStrike

CrowdStrike (Nasdaq: CRWD), a global cybersecurity leader, has redefined modern security with the world's most advanced cloud-native platform for protecting critical areas of enterprise risk — endpoints and cloud workloads, identity and data.

Powered by the CrowdStrike Security Cloud and world-class AI, the CrowdStrike Falcon® platform leverages real-time indicators of attack, threat intelligence, evolving adversary tradecraft and enriched telemetry from across the enterprise to deliver hyper-accurate detections, automated protection and remediation, elite threat hunting and prioritized observability of vulnerabilities.

Purpose-built in the cloud with a single lightweight-agent architecture, the Falcon platform delivers rapid and scalable deployment, superior protection and performance, reduced complexity and immediate time-to-value.

CrowdStrike: We stop breaches.
