

## Exabeam Launches New Application for User and Entity Behavior Analytics in the CrowdStrike Store

*Through integration with CrowdStrike's Falcon Platform, the Exabeam Ingester for CrowdStrike will help security teams identify anomalies and more efficiently detect, prioritize and investigate endpoint threats*

**FOSTER CITY, Calif., May 19, 2020** — [Exabeam](#), the Smarter SIEM™ company, today announced an expansion of its technology partnership with CrowdStrike, a leader in cloud-delivered endpoint protection, to deliver its new application, Exabeam Ingester for CrowdStrike, in the CrowdStrike Store. Exabeam Ingester for CrowdStrike provides access to endpoint telemetry in the CrowdStrike Falcon platform and enables near real-time data streaming to detect advanced threats via a pre-built connector. This allows customers to augment their endpoint data with Exabeam's user and entity behavior analytics (UEBA) to distinguish normal and abnormal behavior, helping to identify risky activity indicating a potential attack, even if it has never been seen before.

“By launching an app in the CrowdStrike Store, CrowdStrike and Exabeam deliver a fully-integrated SaaS offering that provides customers with the flexibility to solve complex security management problems, while also adhering to cloud-first and cloud-only procurement mandates,” said Nir Polak, chief executive officer of Exabeam. “Our goal is to empower SOC analysts to detect advanced threats and protect the enterprise, and this new application makes that possible in a robust, yet efficient way.”

Exabeam Ingester for CrowdStrike provides yet another way for security teams to harness the power of CrowdStrike endpoint data. With seamless, one-click, cloud-to-cloud integration, the application applies UEBA to near

real-time endpoint telemetry in CrowdStrike Falcon without any complexity associated with ingestion and indexing. Further, Exabeam Ingester for CrowdStrike helps to detect advanced and insider threats with use cases including lateral movement, credential compromise, and data exfiltration. Via native integration with Exabeam Advanced Analytics, Exabeam Ingester for CrowdStrike also helps analysts work smarter. With Exabeam, analysts can leverage automatic alert prioritization and machine-built incident timelines to dramatically decrease investigation times and mean time to respond (MTTR) to incidents.

“With this partnership, we are providing our customers another use case for the industry-leading telemetry of the CrowdStrike Falcon platform and the power of the CrowdStrike Store, allowing them to solve for advanced security challenges without adding complexity,” said Amol Kulkarni, chief product officer, CrowdStrike. “We are pleased to strengthen our partnership with Exabeam and enable our customers to experience the combined power of our solutions.”

The Exabeam Ingester for CrowdStrike is now available in the CrowdStrike store and through Exabeam’s reseller channel partners. For more details, please visit <https://www.crowdstrike.com/endpoint-security-products/crowdstrike-store/>.

### **About Exabeam**

Exabeam is the Smarter SIEM™ company. We help security operations and insider threat teams work smarter, allowing them to detect, investigate and respond to cyberattacks in 51 percent less time. Security organizations no longer have to live with excessive logging fees, missed distributed attacks and unknown threats, or manual investigations and remediation. With the modular Exabeam Security Management Platform, analysts can collect unlimited log data, use behavioral analytics to detect attacks, and automate incident response, both on-premise or in the cloud. Exabeam Smart Timelines, sequences of user and device behavior created using machine learning, further reduce the time and specialization required to detect attacker tactics, techniques and procedures.
