SaaS-based security for edge, core, and cloud deployments.

Securing the modern enterprise means protecting a complex web of workloads consisting of hardware, applications, and data spread across edge, core, remote workforce, and cloud deployments. SaaS-based ExtraHop Reveal(x) 360 enables you to unify threat visibility across your attack surface with a truly cloud-native network detection and response (NDR) solution. Reveal(x) 360 deploys quickly, removes much of the management burden from security and IT teams, and begins providing immediate value with 360-degree visibility and situational intelligence in real time.

**COMPLETE VISIBILITY**
Gain deep and continuous visibility into east-west and north-south traffic from the data center to the cloud to the user and device edge.

**REAL-TIME DETECTION**
Cloud-scale machine learning uses more than 1 million predictive models to detect anomalous and suspicious behaviors as soon as they occur.

**INTELLIGENT RESPONSE**
Pivot from detection to forensic evidence in seconds with streamlined investigative workflows. Leverage integrated response automation to immediately act on threats.
Reveal(x) 360 is the first and only SaaS-based network detection and response solution that provides on-demand, unified visibility across multicloud and hybrid environments as well as distributed workforces and operations.

In public cloud environments, Reveal(x) 360 integrates with Amazon VPC Traffic Mirroring, Google Cloud Packet Mirroring, and the announced Microsoft Azure vTAP to deliver agentless, highly elastic NDR that scales up or down to meet your needs.

HOW REVEAL(X) 360 WORKS

Reveal(x) 360 extends cloud-native NDR across hybrid environments by providing full visibility at enterprise scale. Integrated workflows accelerate threat hunting and amplify organizational resources.

ExtraHop sensors deployed locally in data centers, clouds, and remote sites decrypt and process network data, extracting records and de-identified metadata which are sent securely to Reveal(x) 360 for behavioral analysis, real-time threat detection, and investigation.

Reveal(x) 360 offers two models for sensor purchases: reserved priced and on-demand consumption-based. You can choose reserved priced sensors for one-year, two-year, and three-year terms from AWS Marketplace. You can also choose a cloud-native consumption model with on-demand sensors billed by the hour that you select and deploy directly from the Reveal(x) 360 cloud console.

A cloud-based record store with 90-day lookback provides fully hosted and managed search for streamlined incident investigation. A cloud-hosted control plane—accessible from anywhere via the secure web-based Reveal(x) 360 user interface—provides a unified view of your hybrid attack surface.

WHY CLOUD-NATIVE?

Perimeter-focused security tools often rely on fixed agents or logs that can leave visibility gaps, miss critical threats, and add unnecessary friction to DevOps processes. SaaS-based Reveal(x) 360 leverages native integrations with cloud service provider packet mirroring features to provide agentless visibility, packet-level granularity, and security at scale.

To see how Reveal(x) 360 helps international fantasy adventure game maker Wizards of the Coast remove layers of security complexity from their DevOps processes and empower developers to create with speed, read the case study and watch the video. extrahop.com/customers/stories/wizards-of-the-coast/
**Unified security management from edge to core to cloud in a single user interface.**

### USE CASES

<table>
<thead>
<tr>
<th>Threat Detection</th>
<th>Monitoring &amp; Diagnostics</th>
<th>Forensic Investigation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hygiene &amp; Compliance</td>
<td>Incident Response</td>
<td>Vulnerability Assessment</td>
</tr>
<tr>
<td>Inventory &amp; Configuration</td>
<td>Threat Hunting</td>
<td>Dependency Mapping</td>
</tr>
</tbody>
</table>

### REVEAL(X) 360 FEATURES

<table>
<thead>
<tr>
<th>Cloud Record Store</th>
<th>Cloud Control Plane</th>
<th>Packet Capture</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enables 90-day lookback with the ability to purchase additional bands of capacity or leverage on-demand pricing.</td>
<td>Accessible from anywhere via a secure web-based UI for unified security in a single management pane.</td>
<td>Reveal(x) 360 Ultra offers packet capture for in-depth forensic investigation.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Line-Rate Decryption</th>
<th>Global Intelligence</th>
<th>Automated Inventory</th>
</tr>
</thead>
<tbody>
<tr>
<td>Decrypts SSL/TLS 1.3-encrypted traffic, including cipher suites that support perfect forward secrecy (PFS).</td>
<td>Analyzes petabytes of anonymized threat telemetry collected daily from more than 15 million devices and workloads worldwide.</td>
<td>Automatic and continuous asset discovery, classification, and dependency mapping across environments.</td>
</tr>
</tbody>
</table>
CLOUD-NATIVE NDR COMPLETES THE SOC VISIBILITY TRIAD

The missing piece in many security operations centers (SOCs) is network data. Network detection and response provides observed ground truth with context, that can’t be turned off or evaded by savvy attackers, unlike log and agent-based tools. Because of this resilience, cloud-native NDR is the best approach for detecting, investigating, and responding to threats in hybrid, multicloud, remote workforce, and IoT environments.

95% FASTER THREAT DETECTION
77% IMPROVEMENT IN TIME TO RESOLVE
59% LESS STAFF TIME TO RESOLVE THREATS

ABOUT EXTRAHOP NETWORKS

ExtraHop provides cloud-native network detection and response for the hybrid enterprise. Whether you’re investigating threats, ensuring the availability of critical applications, or securing your cloud investment, ExtraHop’s breakthrough approach helps you rise above the noise so you can protect and accelerate your business.
