CrowdStrike and eSentire Join Forces to Bring Industry-leading Cloud-delivered Detection and Response Solutions to the Mid-market

The partnership will deliver joint go-to-market and innovation by integrating eSentire's cloud-native MDR service with the CrowdStrike Falcon Platform

WATERLOO, Ont. – December 19, 2019 – eSentire, Inc., the global leader in cloud-delivered Managed Detection and Response (MDR) today announced a partnership with CrowdStrike, a leader in cloud-delivered endpoint protection, to drive better detection and response for customers by extending and improving visibility across endpoint, network, log and cloud environments.

Digital transformation within modern businesses has outpaced the evolution of traditional security approaches, requiring organizations to adopt cloud-native security solutions that advance and adapt at the speed of their business. As two cloud-native platforms, CrowdStrike and eSentire bring simplicity, speed, and efficacy to endpoint protection and MDR. Combining the managed threat hunting capabilities of eSentire with CrowdStrike's world-class endpoint protection solution and industry-leading proactive threat hunting services will help stop advanced threats.

Kerry Bailey, Chief Executive Officer, eSentire, said: "We are pleased to partner with the endpoint protection market innovator and leader CrowdStrike to manage the security challenges that digital transformation has created for businesses today, particularly in the mid-market segment. The relationship is focused on our combined go-to-market and innovation, which brings together the best security expertise and global security operations centers in the industry to support our joint customers."

George Kurtz, Chief Executive Officer and Co-founder, CrowdStrike, said: "We are partnering with eSentire to ensure that mid-market organizations benefit from the protection of a powerful and proven MDR solution that complements our next-generation endpoint protection solution. Both companies are committed to delivering simplicity, efficacy, and effectiveness of the most advanced endpoint protection, services and security expertise required to stop breaches."

Aaron Sherrill, Senior Analyst, 451 Research, said: "A multi-signal approach provides the visibility needed to protect the many layers of an organization's environment. Digital transformation is driving the rapid adoption of technologies and services, growing the attack-surface faster than most organizations can adapt. A cloud-native MDR platform combined with SOC expertise and endpoint protection and detection provides the security capabilities organizations need to quickly detect and respond to evolving, sophisticated threats."

eSentire extends esENDPOINT offering with CrowdStrike
In addition to the partnership, the two organizations have announced the expansion of eSentire's MDR portfolio to include CrowdStrike's Overwatch, which will be made available as part of the esENDPOINT offering. This offering will protect an organization's assets 24x7x365 no matter where their endpoints reside, by combining the power of elite threat hunting with next-gen antivirus and endpoint detection and response under a single agent to eliminate blind spots traditional technologies miss.
