The portability and usability of USB devices make them essential in today's enterprise environments. Yet these devices pose a significant security risk, bringing malware into organizations and leaking data out. Although device control solutions exist, they don’t provide the contextual visibility and granular control required to understand and manage today’s powerful devices.

Falcon Device Control™ ensures the safe utilization of USB devices across your organization. Built on the Falcon platform, it uniquely combines visibility and granular control, allowing administrators to ensure that only approved devices are used in your environment. When used with Falcon Insight™, visibility is extended, adding searchable history and logs of USB device usage, including files written to devices.

Leveraging the power of the CrowdStrike® platform and accessed through the Falcon management console, Falcon Device Control is the industry’s only 100 percent cloud-delivered and managed device control solution.
KEY PRODUCT CAPABILITIES

VISIBILITY ACROSS USB DEVICE USAGE — EFFORTLESSLY

Discover devices automatically:
Gain continuous insight into USB devices across your organization, including those not covered by a policy. Falcon Device Control automatically reports device type (e.g., mass storage, human interface, etc.) with manufacturer, product name, and serial number. You have visibility into all devices operating over the USB bus, including internal/non-removable USB devices and those not categorized as USB by Windows, such as Bluetooth.

A wealth of information at your fingertips:
Immediately see which devices are used in your environment and how they are being used at a glance via usage dashboards. Falcon Device Control provides insight into processes executed from USB storage, users, and hosts where USB devices were used.

Immediate and powerful search capabilities:
Falcon Device Control provides fast and powerful search capabilities. Examine your environment for vital information such as the devices used on a specific machine. When used with Falcon Insight, search expands to include historical logs of device usage or blocking.

Extend Falcon Insight visibility:
Monitor files written to storage, giving you visibility into what’s being copied to devices.

PRECISE AND GRANULAR POLICY ENFORCEMENT

Strict policy enforcement:
Define device control policies for endpoint groups, whitelist and blacklist devices by class, vendor, product serial number and/or specific device ID. Define device control policies for endpoints both on and offline.

See the impact of policies before implementing them:
Alerts and dashboards allow you to see how your policies will impact users before rolling them out.

Define granular policies for drives:
Allows read/write or read-only access, while blocking execution of applications on USB drives.

Automatically get device information for quick and easy policy creation and management workflows:
Falcon Device Control automatically obtains devices’ vendor, class model and serial number, without requiring the use of external tools or device managers, allowing you to create policies for all devices being used in your environment.

SEAMLESS INTEGRATION WITH FALCON ENDPOINT PROTECTION

One agent, one console, one platform:
As a 100 percent cloud managed and delivered solution, Falcon Device Control is enabled via the same lightweight Falcon agent, managed by the same console, and fully integrated with the Falcon platform.

Immediate implementation and management:
Falcon Device Control hits the ground running and is operational in minutes.

EMPOWERS YOU WITH IMMEDIATE USB DEVICE VISIBILITY AND PROTECTION AT YOUR FINGERTIPS

You want your users to be able to use their portable devices without being exposed to the inherent risks. That’s why Falcon Device Control provides the granular visibility and control needed to enable safe device usage, while leveraging the extensibility of the Falcon platform.

VISIBILITY AND GRANULAR CONTROL

Falcon Device Control provides visibility over USB device usage and granular control over utilization, for fast and easy mitigation of the risks associated with those devices.

ABOUT CROWDSTRIKE

CrowdStrike is a leader in cloud-delivered endpoint protection. The CrowdStrike Falcon® platform offers instant visibility and protection across the enterprise and prevents attacks on endpoints on or off the network. Falcon seamlessly unifies next-generation AV with best-in-class endpoint detection and response, backed by 24/7 managed hunting. There’s much more to the story of how Falcon has redefined endpoint protection but there’s only one thing to remember about CrowdStrike: We stop breaches.
