

CROWDSTRIKE

COMPROMISE ASSESSMENT

CrowdStrike's Compromise Assessment service helps organizations determine if advanced attack groups or other adversaries are currently active or have been active in their environment

KEY STATS:

25%

IN A QUARTER OF INCIDENTS CROWDSTRIKE HAS INVESTIGATED, MULTIPLE ATTACKERS WERE PRESENT IN THE CLIENT'S ENVIRONMENT.

02
DAYS

ON AVERAGE, ADVERSARIES ENGAGE IN REINFECTION ATTEMPTS WITHIN TWO DAYS OF COMPREHENSIVE REMEDIATION EFFORTS.

57%

OF ALL ORGANIZATIONS ARE DISCOVERING BREACHES ON THEIR OWN. CROWDSTRIKE ATTRIBUTES THIS TO TWO FACTORS: ORGANIZATIONAL MATURITY AND IMPROVED ENDPOINT AND NETWORK DETECTION TECHNOLOGY. HOWEVER, ADVERSARIES CONTINUE TO EVOLVE THEIR ATTACK METHODS.

OVERVIEW:

A CrowdStrike Compromise Assessment allows organizations to proactively identify suspicious activity within their environments. Our consultants apply their expertise with host and network-based technology to identify systems with suspicious behavior and to pinpoint other areas of concern within your network. Malicious activity can result in the theft of valuable intellectual property and adversely impact business operations.

ANYONE TASKED WITH AN ORGANIZATION'S IT SECURITY NEEDS TO KNOW:

- Have attackers previously accessed your environment?
- Are attackers targeting your network and adversely impacting business operations?
- What can you do to reduce the risk of a targeted attack?
- How can you deter and prevent attacks that target your environment and confidential customer information?

CrowdStrike's seasoned and trusted team of incident responders, malware researchers, and cyber intelligence professionals will answer these questions and help you take decisive action against today's most sophisticated cyber attacks. Our team comes from government intelligence agencies, the military and premier security consulting firms. They are seasoned professionals who will integrate effectively with your current in-house IT staff, resulting in an efficient and productive engagement.

WHY CROWDSTRIKE?

INVESTIGATIVE SKILLS

Technical & investigative skills developed over the course of years of incident response engagements. Our specially selected team members average 10 years of experience and come from military and government intelligence agencies and top security consulting firms. Remember: your adversaries are people – and you need seasoned professionals with the right experience to discover and mitigate damage to your business-critical operations.

SUPERIOR TECHNOLOGY PLATFORM: FALCON HOST

Falcon Host is our advanced endpoint protection and monitoring technology. It provides the real-time visibility and intelligence necessary to identify attackers currently in the environment or those who have been active in the past. Get forward a looking windshield view now before attacker actions occur.

ADVANCED THREAT INTELLIGENCE: FALCON INTELLIGENCE

A team focused solely on researching the latest exploits and reverse engineering malicious software.

Our team also profiles key attack groups, including their tools, practices and objectives along with corresponding Indicators of Compromise (IOC) and Indicators of Attack (IOA).

MANAGEMENT EXPERIENCE

Experienced and trusted professionals providing guidance and actionable advice on the business impact of security issues discovered during the assessment.

ABOUT CROWDSTRIKE SERVICES

CrowdStrike Services stops breaches by providing pre and post Incident Response services to proactively defend against and respond to cyber incidents. Our seasoned team of cyber intelligence professionals, incident responders, and malware researchers consists of a number of internationally recognized authors, speakers, and experts who have worked on some of the largest and most publicized and challenging intrusions and malware attacks in recent years. The CrowdStrike Services team leverages our Security Operations Center to monitor and provide cutting-edge advanced adversary intrusion detection services. The full spectrum of proactive and response services helps customers respond tactically as well as continually mature and strategically evolve Incident Response program capabilities. In addition to being a Qualified Security Assessor (QSA), CrowdStrike Services is also fully certified as a PCI Forensics Investigator (PFI). CrowdStrike Services is accredited by the National Security Agency for Cyber Incident Response Assistance.
