

CYBERSECURITY MATURITY ASSESSMENT

CrowdStrike Services helps you stop the breach before it starts

ANTICIPATE. IMPROVE. PREPARE

The goal of the CrowdStrike Cybersecurity Maturity Assessment (CSMA) is unique in the "assessment" arena. Many assessments aim to provide you with a level of compliance or recommendations required to pass your next audit, but CrowdStrike actually helps you prepare for the biggest risk facing organizations right now: the threat of a targeted attack. The CrowdStrike Services team assesses your organization's cybersecurity environment to identify the weak points that adversaries will utilize to compromise your environment. To this end, we help you answer three key questions:

WHAT ARE THE GAPS IN YOUR CYBERSECURITY PROGRAM ACROSS PEOPLE, PROCESS AND TECHNOLOGY?

- How mature is your organization today, what level of maturity should it strive for, and how does it compare to the maturity of others in your industry?
- How should you prioritize improvement opportunities along a security roadmap that plots your increased maturity over immediate, intermediate, and long-term timelines?

HOW WE DO IT

CrowdStrike Services reviews your existing cybersecurity program to understand how prepared you are to deal with today's most sophisticated attacks. We will review your relevant internal documentation and then meet with individuals within your organization who understand how things work in practice. Together, we'll help to paint the picture of where your capabilities are strong, where you can improve, and how you can mature across five key cybersecurity areas.

When onsite, we meet with the identified staff members for about 30 to 45 minutes. Two of our consultants perform the interviews. Then, our team will spend the remainder of the time in interactive discussion with the security team, exploring possibilities for projects and tactics.

All this in-depth discussion with your team leads us to understand how your people and tools contribute to your current incident detection and response capabilities. Additionally, we can determine what your technical capabilities are now, how those capabilities either complement or conflict with others in your organization, as well as other human and technical factors.

ACTIONABLE GUIDANCE AND DELIVERABLES

The CrowdStrike cybersecurity framework goes beyond the standard audit or information security assessment. The Cybersecurity Maturity Assessment can be mapped to the NIST framework, however, we have strategically emphasized controls within areas that will assist our customers with their overall cybersecurity program, which we've bucketed into the following five categories:

- **Intelligence Collection**
- **Detection**
- **Prevention**
- **Response**
- **Governance**

CROWDSTRIKE SERVICES PREPARES SEVERAL DELIVERABLES DURING A CYBERSECURITY MATURITY ASSESSMENT. THOSE WRITTEN DELIVERABLES INCLUDE:

- An assessment of your organization's current maturity, a recommended target maturity, and a view into the range of maturities for others in your industry
- Our observations and findings from the documentation review and discussions
- A roadmap of actions your organization should take to improve its cybersecurity maturity with each action's difficulty and priority

All deliverables are provided in written format. Additionally, we provide both senior executive and technical briefings.
