Research Methodology

CrowdStrike commissioned independent technology market research specialist Vanson Bourne to uncover the issues security teams face as they contend with accelerated transformations and modern threat actors. A total of 900 IT security decision makers and professionals were interviewed in January and February 2021, with equal representation across North America (300), Europe (300) and APJ (300) regions. Respondents were required to be from organizations with at least 250 global employees and from across the private and public sectors. For more information, download the [white paper](#).
