

IMPROVE YOUR CLOUD SECURITY POSTURE

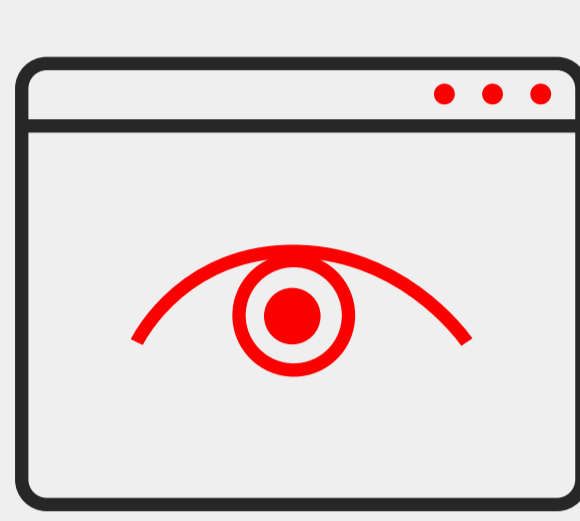

Improving cloud security posture requires an understanding that **there are problems that you might not notice.**

76% use 2 or more cloud providers*

Top Security Challenges

53%

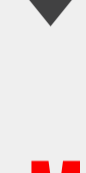

lack of visibility*

VISIBILITY

Lack of complete visibility for multi-cloud environments due to shadow IT.

SOLUTION

- ▶ Unified discovery and visibility of the multi-cloud environments
- ▶ Continuous, intelligent monitoring of cloud resources to proactively detect misconfigurations, vulnerabilities and security threats, combined with guided remediation

MISCONFIGURATION

Moving fast makes applications susceptible to misconfigurations

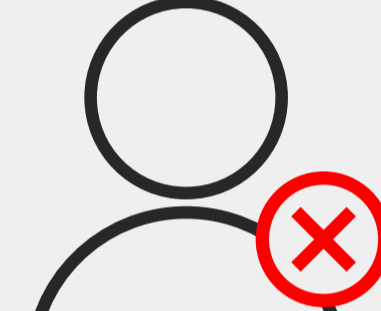

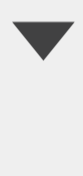

99%

of cloud security failures predicted to be the customer's fault, through 2023*

(Source: Gartner)

SOLUTION

- ▶ Simplified management and security policy enforcement
- ▶ Real-time cloud monitoring and threat intelligence preventing misconfiguration

99%

unauthorized access

ACCESS CONTROL/ UNAUTHORIZED ACCESS

Excess permission increases identity-based threats

SOLUTION

- ▶ Ensure minimal set of privileges per user to perform job-related actions, for the time the action is necessary
- ▶ Assign roles of administrator and contributors based on the responsibility of each user
- ▶ Deploy multi-authentication factor

SECURING THE CONTROL PLANE

Preventing attackers from modifying access and configurations across cloud deployments

46%

not enough control*

SOLUTION

- ▶ Monitor and audit access to console
- ▶ Ensure confidence scoring and prioritization
- ▶ Indicator of Attack (IOA) and Indicator of Compromise (IOC) for cloud with integrated threat intelligence
- ▶ Implement continuous control plane threat detection

32%

legal & regulatory compliance

SECURITY COMPLIANCE AND AUDITING

Ensuring compliance of cloud resources

SOLUTION

- ▶ Ensure cloud deployments meet various compliance standards (HIPAA, PCI DSS, NIST, GDPR)
- ▶ Audit-ready compliance by automating the assessment of security and compliance controls
- ▶ Ability to create custom policies for unique governance needs
- ▶ Enforce compliance across AWS, Azure, and GCP

TIPS to Improve Cloud Security Posture
