

FALCON COMPLETE LOGSCALE

Managed observability and log management from CrowdStrike

MODERN LOG MANAGEMENT BACKED BY INDUSTRY-LEADING EXPERTISE

Gaining complete visibility into modern IT environments is increasingly important for organizations. The information you need to make decisions about the health and security of your IT environment is often in log and events data – a valuable but ever-increasing resource. A modern log management platform gives you the technology to ingest and search massive amounts of data to generate insights and understand vulnerabilities in the system.

When securing a diverse and complex IT infrastructure, you may need more than technology alone to explore threats and identify system vulnerabilities. Many organizations still require a mix of technology and expertise to explore, investigate and maximize the value of their infrastructure, security and developer data.

Falcon Complete LogScale is a CrowdStrike log aggregation and management module delivered as a managed service. By combining the effectiveness of Falcon LogScale technology with CrowdStrike's managed services expertise, Falcon Complete LogScale gives organizations the personalized log management expertise to answer any question, increase CI/CD pipeline velocity and gain valuable insights from their log data in real time.

KEY BENEFITS

REAL-TIME DATA VISIBILITY

With Falcon Complete LogScale, get valuable insights from your log data via powerful, flexible and customizable dashboards and workflows we set up for you

OBSERVABILITY AT PETABYTE SCALE

Regardless of your business type, Falcon Complete LogScale gives you the scalability to visualize log data, carry out investigations and collaborate at petabyte scale

SUB-SECOND SEARCHES

Falcon LogScale uses an index-free architecture and advanced compression technology to help you ingest and search your log data with sub-second search latency

EXTEND YOUR TEAM

CrowdStrike's elite team of log management and observability experts provides deep and continuous analysis to help you drive key business outcomes

KEY CAPABILITIES

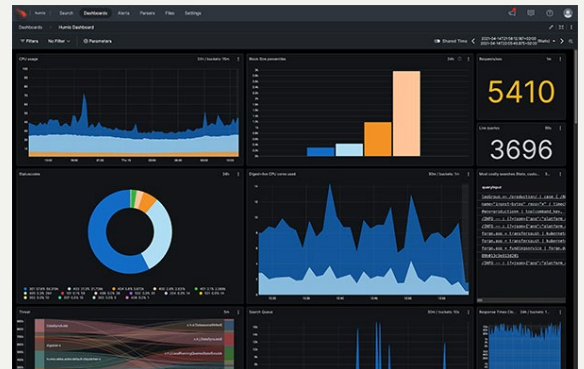

MANAGE AND MONITOR LOGS TO ENSURE PLATFORM AVAILABILITY AND HEALTH

- Defined and documented log management requirements
- Proactive guidance for data ingestion
- Custom queries to maintain health of ingested data and alerts

VISUALIZE DATA TO GAIN INSIGHT

- Dashboards and saved searches to operationalize insights
- Customized alerting based on specified thresholds
- Normalized data via a common schema for correlation and constant visibility across the organization

ADD CONTEXT AND IMPROVE DECISION MAKING

- Custom content and parsers based on desired business outcomes
- Correlated log sources and continuous guidance on how to operationalize log data
- Better insights based on CrowdStrike expertise and log management best practices

ABOUT CROWDSTRIKE

CrowdStrike Holdings, Inc. (Nasdaq: CRWD), a global cybersecurity leader, has redefined modern security with the world's most advanced cloud-native platform for protecting critical areas of enterprise risk — endpoints and cloud workloads, identity and data.

Powered by the CrowdStrike Security Cloud and world-class AI, the CrowdStrike Falcon® platform leverages real-time indicators of attack, threat intelligence, evolving adversary tradecraft and enriched telemetry from across the enterprise to deliver hyper-accurate detections, automated protection and remediation, elite threat hunting and prioritized observability of vulnerabilities.

Purpose-built in the cloud with a single lightweight-agent architecture, the Falcon platform delivers rapid and scalable deployment, superior protection and performance, reduced complexity and immediate time-to-value.

CrowdStrike: **We stop breaches.**
