Challenges

Organizations are under tremendous pressure to securely transform their computing environments and radically change the way they defend against the most sophisticated adversaries and their constantly evolving tactics and techniques. Using legacy technologies and relying on single-vendor point solutions to protect against today’s threats expose customer data and critical infrastructure to grave risk. Further, there is a lack of skilled in-house or dedicated resources that are equipped with the necessary cybersecurity training and tools to detect modern threats and vulnerabilities plaguing people, organizations and governments worldwide.

Solution

The Security Alliance for Google Workspace program helps protect organizations — which have increasingly remote and hybrid workforce environments — against today’s cybersecurity threats. It provides access to a range of offerings combining Google Workspace with industry-leading solutions from across Google and CrowdStrike. The program is designed to meet the needs of all organizations, many of which rely on legacy technology and may not have the in-house expertise to fully address the rising security challenges associated with hybrid work.

The Security Alliance for Google Workspace program provides secure collaboration and communication experiences by combining Google services with the CrowdStrike Falcon® platform, the industry’s only unified solution combining next-gen antivirus (NGAV), endpoint detection and response (EDR), cloud workload protection, managed threat hunting, integrated threat intelligence and IT hygiene.

Key Benefits

- Increased visibility and control across the enterprise
- Accelerated threat investigation
- Real-time notification and remediation
Technical Solution

Organizations work safer with the CrowdStrike Falcon platform's endpoint and workload protection and Falcon Zero Trust Assessment (ZTA).

Endpoint and Workload Protection

CrowdStrike has redefined security with the world's most advanced cloud-native platform that protects across endpoints and workloads and enables the people, processes and technologies that drive modern enterprise. Powered by the CrowdStrike Security Cloud and world-class artificial intelligence (AI), the Falcon platform leverages real-time indicators of attack (IOAs), threat intelligence, evolving adversary tradecraft and enriched telemetry from across the enterprise to deliver hyper-accurate detections, automated protection and remediation, elite threat hunting and prioritized observability of vulnerabilities. Purpose-built in the cloud with a single lightweight-agent architecture, the Falcon platform delivers rapid and scalable deployment, superior protection and performance, reduced complexity and immediate time-to-value.

Zero Trust

To streamline the adoption of a Zero Trust framework and strengthen Zero Trust initiatives, Google Cloud's BeyondCorp Enterprise and Google Workspace integrate with Falcon Zero Trust Assessment (ZTA), allowing joint customers to create and enforce granular access policies to applications using CrowdStrike's unique risk signals. The integration enables more seamless sharing of telemetry and data between the two security platforms, helping maintain the highest levels of security across a customer's entire cloud or hybrid environment.

Key Capabilities

The Falcon platform helps customers up-level their breach protection by providing:

- **Increased visibility and control:** CrowdStrike identifies unprotected and rogue systems and monitors which applications and user accounts are being used in the environment — all managed from a single console.

- **Accelerated threat investigation:** CrowdStrike provides rich contextual telemetry to help prioritize and investigate real-time threats. The CrowdStrike Falcon® Complete 24/7 managed endpoint protection service ensures complete control and confidence that your endpoint protection is optimized for best performance and protected by CrowdStrike's seasoned security professionals.

- **Dedicated integrations:** Google Cloud’s Chronicle security analytics engine integrates with the Falcon platform, enabling security teams to more easily analyze endpoint and workload telemetry to find and address threats quickly. The integration enables teams to correlate petabytes of data from Chronicle with datasets from the Falcon platform, empowering them to thoroughly investigate stealthy long-term attacks occurring across multiple surfaces and stop new, evolving threats — truly transforming their security.
Google Cloud is a trusted CrowdStrike Cloud Partner, providing integrated solutions with CrowdStrike to deliver comprehensive protection to endpoints, cloud workloads and identity.

**About Google Cloud**

Google Cloud accelerates organizations’ ability to digitally transform their business with the best infrastructure, platform, industry solutions and expertise. It delivers enterprise-grade cloud solutions that leverage Google’s cutting-edge technology to help companies operate more efficiently and adapt to changing needs, giving customers a foundation for the future. Customers in more than 200 countries and territories turn to Google Cloud as their trusted partner to solve their most critical business problems.
