

Are You Ready for Managed Detection and Response?

Four Ways MDR Drives Security Success

Security teams are defending against a threat landscape shaped by the “4 S’s”: speed, scale, skills and spend. Using each S as evaluation criteria for the state of security programs, you can determine your readiness for managed detection and response (MDR).

Speed

79 minutes

was the average eCrime breakout time CrowdStrike observed in 2023.

7 minutes

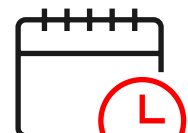

was the fastest eCrime breakout time CrowdStrike observed.¹

The faster you identify a threat, the quicker you can remediate it, reducing risk exposure and decreasing adversary dwell time.

With MDR, you can:

Reduce mean time to detect (MTTD) and mean time to respond (MTTR) to minutes

Start detecting and responding to threats **within days**

Scale

110% ↑ increase in interactive intrusions with malware-free, hands-on-keyboard activity in the past two years.²

Defenders need modern countermeasures to detect and disrupt advanced attacks at scale. As attackers evolve and forge novel tradecraft, MDR counters with:

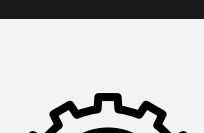

Frictionless protection

and immediate time-to-value, stopping attacks on Day One

Surgical threat remediation

eradicating multi-domain threat activity from end to end

Skills

+3.4M

global shortage of cybersecurity professionals³

When hiring and retaining skilled staff becomes untenable, security leaders must adapt quickly. MDR immediately augments your security operations center (SOC), rightsizing security to the size and scope of your business.

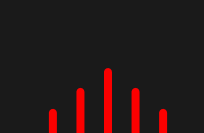

MDR adds an army of proactive threat hunters, incident responders and security analysts who:

Triage new alerts 24/7

Dynamically boost in-house and outsourced SOC capacity with elite, certified and battle-tested experts

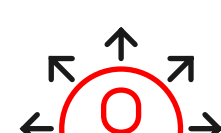

Spend

Cloud adoption, remote working, third-party infrastructure integration, and the convergence of IT, operational technology (OT) and the internet of things (IoT) are expanding the attack surface, resulting in high costs for organizations.

MDR generates remarkable business value and cost savings, including:

403% ROI or greater through efficiency gains and added analyst full-time employee (FTE) capacity*

Elimination of redundant tools by consolidating platforms and legacy antivirus (AV) software

Reduced cyber insurance premiums with more favorable terms and conditions

*403% ROI validated by Forrester's Total Economic Impact of CrowdStrike Falcon® Complete

Slow security that doesn't scale is no match for today's sophisticated adversaries. Breaking free of legacy SOCs and inefficient operations has always been a pipe dream for security professionals — until now.

Discover what you need to kick-start your managed security journey and move to MDR. Get your copy of CrowdStrike's Managed Security Readiness Guide — which includes a 10-question bonus quiz — to get started with MDR today.

About CrowdStrike

CrowdStrike (Nasdaq: CRWD), a global cybersecurity leader, has redefined modern security with the world's most advanced cloud-native platform for protecting critical areas of enterprise risk — endpoints and cloud workloads, identity and data.

Powered by the CrowdStrike Security Cloud and world-class AI, the CrowdStrike Falcon® platform leverages real-time indicators of attack, threat intelligence, evolving adversary tradecraft and enriched telemetry from across the enterprise to deliver hyper-accurate detections, automated protection and remediation, elite threat hunting and prioritized observability of vulnerabilities.

Purpose-built in the cloud with a single lightweight-agent architecture, the Falcon platform delivers rapid and scalable deployment, superior protection and performance, reduced complexity and immediate time-to-value.
